Summary

- Around 5 Years of Experience of software development experience in designing UI applications and enterprise web applications using HTML5, DOM, CSS3,SAAS, Bootstrap, jQuery, ES6, JSON, React, Next.js, Node.js, Webpack, TypeScript, JavaScript, Figma, etc.
- Expertise in developing responsive web design with Bootstrap, CSS3, media queries, and flexbox.
- Solid mastery of using React JavaScript framework to build robust single page web applications.
- Strong experience in working with React using Redux state management, React Hooks, Component Communication, configuring stores and lifecycle methods
- Experienced in using Redux, Redux-Thunk middleware along with React to have state management ability with reusable data and actions.
- Having good experience in implementing NodeJS server-side code to interact with PostgreSQL to store and retrieve data by using Sequelize drivers.
- Experience in debugging and troubleshooting and familiar with debugging tools (Firebug, Chrome Inspector) and front-end testing tools like React Testing Library, Jest, Enzyme, and Mocha under TDD.
- Experience in using version control tools such as SVN and GIT.
- Experience in using JIRA and following the AGILE development process, and deep understanding in Software Development Life Cycle (SDLC) including requirements analysis, design, testing, implementation, and maintenance.
- Excellent goal-oriented and motivated team player, fast-learner and self-starter with good communication skills.

Technical Skills

Languages
HTML5, CSS3, JavaScript (ES6+), TypeScript, Python
Technologies
React JS, Node JS, jQuery, Redux/Flux, Hooks/Context API, RESTful APIs, Webpack, PostgreSQL, MySQL, MongoDB, Bootstrap, Express JS, GraphQL
Testing Libraries & Tools
Jest, Enzyme, React Testing Library, Mocha, Postman, Insomnia
SDLC
Agile/Scrum, Waterfall, Test & Behavior Driven Development (TDD & BDD), JIRA
Version Control & Package Managers
Git, NPM, Yarn, TortoiseSVN

Work Experience

T3 Trading Group, LLC New York City, NY
Software Engineer Oct 2020-Sep 2022

- Developed user interfaces using JavaScript, React, Redux, and React-Router for SPA development.
- Leveraged React's component-based architecture to build a re-usable component library for components such as responsive menus, trees, sliding views, table grids, charts, and dashboard.
- Utilized Redux to maintain a single, immutable source of truth on the front end and make data easily available to components while minimizing prop drilling across deeply nested components.
- Integrated React Hooks and Redux Hooks, reducing boilerplate and increasing code readability while maintaining backwards compatibility with existing legacy codebase.
- Implemented custom Redux Thunk to maintain functional paradigm while delaying action creators to handle asynchronous requests and maintaining a data isormorphism with the server.
- Utilized Styled Components to scope styles to React components and maintain consistent design.
- Used GraphQL queries to retrieve data from the endpoint.
- Implemented Test Driven Development (TDD) on React applications via unit testing via Jest.
- Utilized Webpack to improve load times by implementing lazy loading, code splitting, minifying and extracting CSS, and utilized Babel to transpile JSX and JavaScript (ES6+) to ES5.
- Worked with NPM commands and using package.json for managing dependencies and dev-dependencies of NodeJS applications.
- Organized and facilitated daily Agile Scrum meetings, which included Sprint Planning, Daily Scrums, Daily Stand ups, Sprint Review, and Code Review.

Gitti Gidiyor Istanbul, Turkey
Software Engineer June 2017 - July 2020

- Worked on server-side web applications using Node.js and involved in the Construction of UI using HTML5, SASS, JavaScript, TypeScript, React, Ext JS, and Bootstrap.
- Used React states, specs, props, and event to create interactive web components with seamless user experience.
- Used the React function component and hooks for the new feature of the project to reuse the logic efficiently.
- Facilitated TypeScript syntax integration for minimizing JavaScript type errors at compile time and maintaining a self-documenting codebase across the development team via Intellisense.
- Developed RESTful web services for backend using Node JS, Express JS, and NoSQL.
- Used React, Axios to create Components to handle events triggered by clients and send requests to the server.

- Produced responsive content pages with CSS media queries and incorporated CSS pre-processors such as SCSS/SASS to streamline a consistent styling process across development team.
- Used JIRA for bug tracking, issue tracking and task/story management. Leveraged Jest and Enzyme as part of a Test-Driven Development.

VakifBank   Istanbul, Turkey
Software Engineer   June 2016-May 2017

- Developed interactive user web pages in an enterprise setting with HTML, CSS, jQuery, and AJAX.
- Handled user-facing features such as slideshow, dropdown menus, and tabs using jQuery.
- Involved in development of rich cross-platform user interface components using JavaScript, jQuery, and HTML and achieved responsiveness of the components using Bootstrap CSS.
- Utilized extensive JavaScript and jQuery across the platform for CSS manipulation and form validation via jQuery Validator plug in for client-side validation and custom validation controls.
- Created basic animations for jQuery and rich interface components such as tabs and accordion.
- Leveraged Git for version control, chrome dev tools for debugging, and Jenkins for deployment.
- Worked in an Agile Environment and participated in requirement gathering, analysis and design.
- Used Jasmine, Karma, Gulp, and NPM to build and test applications. Performed unit testing using Jasmine and end to end testing using Selenium.

Personal Projects

E-commerce Web App:

- PERN stack E-Commerce Web App with product catalog, shopping, user registration and login, admin panel to manage users, and products.
- Tech Stack: React, Redux, Bootstrap, Node, Express and PostgreSQL
- Link to project

Chat Application:

- Chat App with chat rooms, user registration and login.
- Tech Stack: React, Redux, Firebase and UI libraries.
- Link to project
